Why you choose Information Technology?

prompt

Write a little about how and why and you chose your major. When did you choose or declare your major? How far along are you? What first drew you to this major? What do you like best about it? What do you like least about it? Do you think that your decision was shaped more by your formal education or by experiences outside the classroom, including any attempts you made to educate yourself? What questions do you hope to answer through your studies in this field? What would you like to learn more about? In what ways are your goals and interests similar to those of other students you know with your major? In what ways are they different?

declare

sub-prompt

When did you choose or declare your major? What first drew you to this major? What do you like best about it?

responses

I choose to declare my major after taking a computer science class on a whim and got hooked. I knew I didn't want to do the math because I've been traumatized by evil math teachers in the past so I choose Information Technology instead of Computer Science.

autodidect

sub-prompt

Do you think that your decision was shaped more by your formal education or by experiences outside the classroom, including any attempts you made to educate yourself?

response

My decision was shaped by my experiences in the classroom, but I wouldn't have had those experiences if I stuck to the path that was laid out for me by the education system. As with anything, if you choose to be in a classroom, you'll enjoy it, but if you're forced to be in the class, you'll hate it.

final essay

sub-prompt

What questions do you hope to answer through your studies in this field? What would you like to learn more about? In what ways are your goals and interests similar to those of other students you know with your major? In what ways are they different?

response

As with any other engineering(ish) major, I hope to maximize efficiency thereby saving the world.
